

Marty's Musts - Stuff everyone should do

1. Enter your medical emergency contacts in the Health App; Set up Emergency on your lock screen

2. Place SETTINGS AT THE TOP left ON PAGE 1 or in the dock/ IT IS THE MOST IMPORTANT ICON AND IS USED FOR ANYTHING YOU WANT TO CONTROL; daily bet there from any page by pushing Home button

3. SECURITY IS MOST IMPORTANT / DO NOT SHARE PASSCODE / DO NOT MAKE IT OBVIOUS/ do not use 1234 or 1397 or 1111 etc; Remember it! / DO NOT WRITE IT DOWN / 6 characters are better / a phrase is best

OR, Set up the touch id/ Lift and rest your finger on the home button repeatedly It builds your fingerprint visually; many apps are using touch ID now; set up more than one finger; even family members

4. BE SURE TO CHECK ERASE DATA AFTER TEN TRIES – PROTECT YOURSELF

5. BACK up to iCloud or iTunes or both
Wi-fi is best / Plug it in each night / Automatically back up/ Never worry/ Use your cord and desktop to back up via iTunes at least monthly BUT BACK UP OFTEN

6. Name your iPad / Type whatever you want / Some utility when you are on a network to find your devices/ More and more are coming

7. iCloud setup / Turn on FIND MY IPAD in case you ever lose it

8. Use 1Password or keychain to secure your passwords and make them strong; change them t least quarterly; adding a symbol is the easiest way to do that (if your site will allow it)

9. Set up shared calendars among family members; friends; organizations - make your life a little bit easier

10. Notifications are how you learn things / Show them here/ Can be sounds, visuals or flags and banners / You can apply notifications to each program Sounds burdensome doesn't it? I mean how much info do you need on the fly? / You'd be surprised!
